## Pricing a frame - How to measure artwork

## Step 1

Measure the artwork to get measurements ' $\mathbf{A}$ ' and ' $\mathbf{B}$ ' and subtract 4 mm from each measurement for the mountboard overlap
e.g. $A=300 \mathrm{~mm}-4 \mathrm{~mm}=\mathbf{2 9 6 m m}$
$B=400 \mathrm{~mm}-4 \mathrm{~mm}=396 \mathrm{~mm}$

M
(Mount width $\times 2$ )

## Step 2

Choose a mount border width:

- Narrow 30mm
- Medium 50mm
- Wide 70mm

Multiply this by 2 . This will be measurement ' $\mathbf{M}$ '
e.g. $30 \mathrm{~mm} \times 2$ so $\mathbf{M}=\mathbf{6 0 m m}$

## Step 3

Now add the measurements in Steps $1 \& 2$ together to get the 'glass size'
$A=296 \mathrm{~mm}+60 \mathrm{~mm}=356 \mathrm{~mm}$
$B=396 \mathrm{~mm}+60 \mathrm{~mm}=456 \frac{\mathrm{x}}{\mathrm{mm}}$
Use the 'glass size' to calculate the price of the frame
